

Reliance Infocomm Do's and Don't's of Building a Large Metro Ethernet Network

Feb 2004

Service Offering – Triple Play Services

Addressing Requirements for both the Residential and Corporate Markets

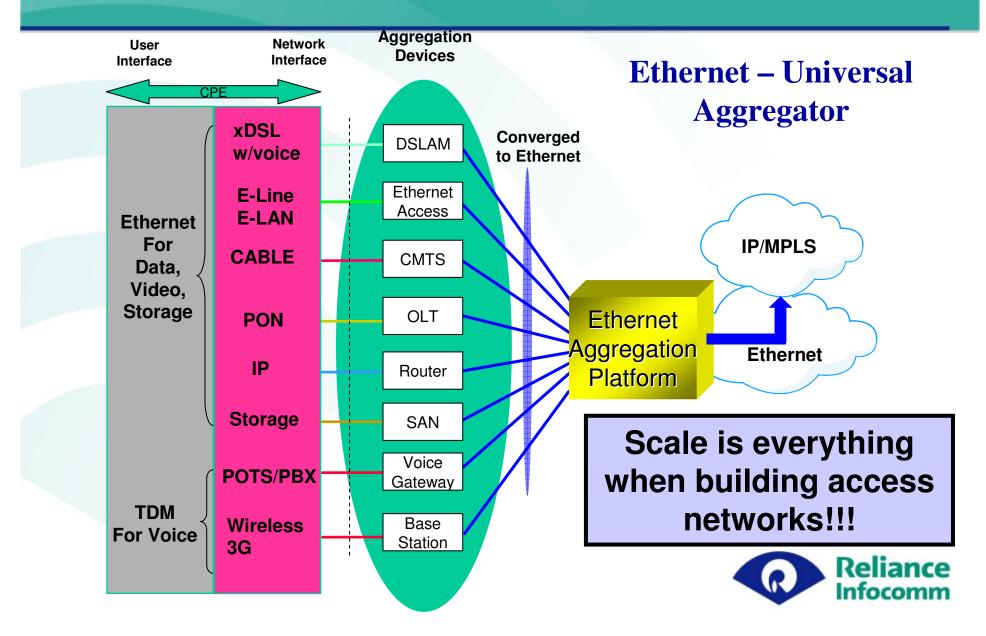

- Data
 - Layer 2 VPNs
 - Ethernet Leased Lines (P2P)
 - Hub and Spoke Connectivity (P2MP)
 - Mesh or TLS (MP2MP)
 - Layer 3 VPNs
 - 2547 VPNs
 - Internet Access
 - Direct Internet Access
 - Transient Internet Access

- Voice
 - VolP
 - IP Centrex
- Video
 - Video Broadcast/Near Video on Demand
 - Video on Demand/Pay Per View
 - Video Conferencing
 - Video Telephony

Integrated Access ?? What is the First Mile Enabler ??

Architectural Choices – Why Ethernet ?

Architectural Choices

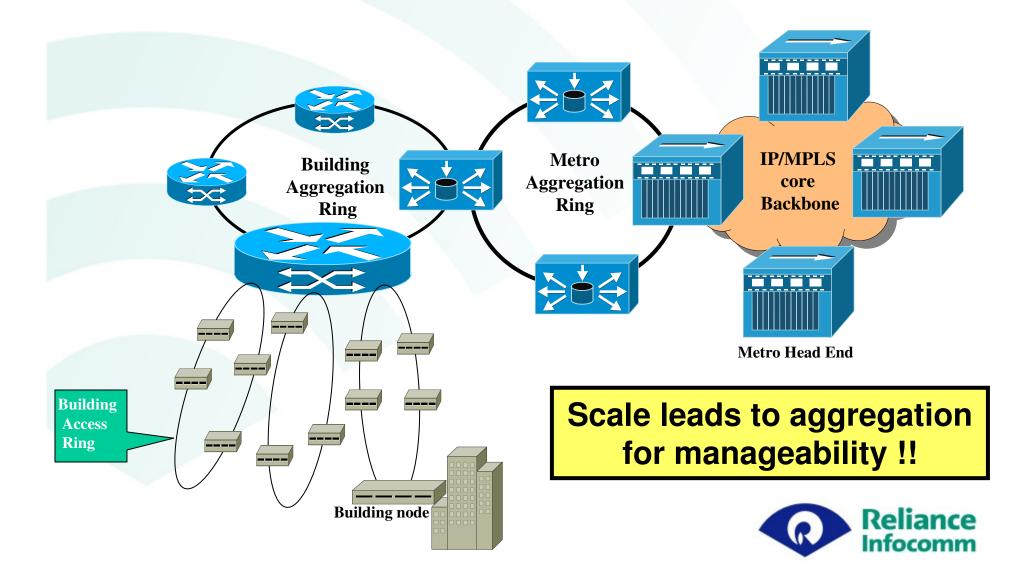

Optical Ethernet vs. Routed/Switched Ethernet for the Metro

- Optical Ethernet World
 - Ethernet as Service
 - TDM as transport
 - Maps Ethernet 10/100/1000 ports into some SDH/SONET hierarchy
 - Utilizes the underlying transport infrastructure
 - Loses the cost advantage provided by Ethernet by exposing it to costly TDM transport
 - Loses the statistical multiplexing gains as the mapping is fixed to SDH granularity
 - Simpler since there are no complex routing/switching protocols

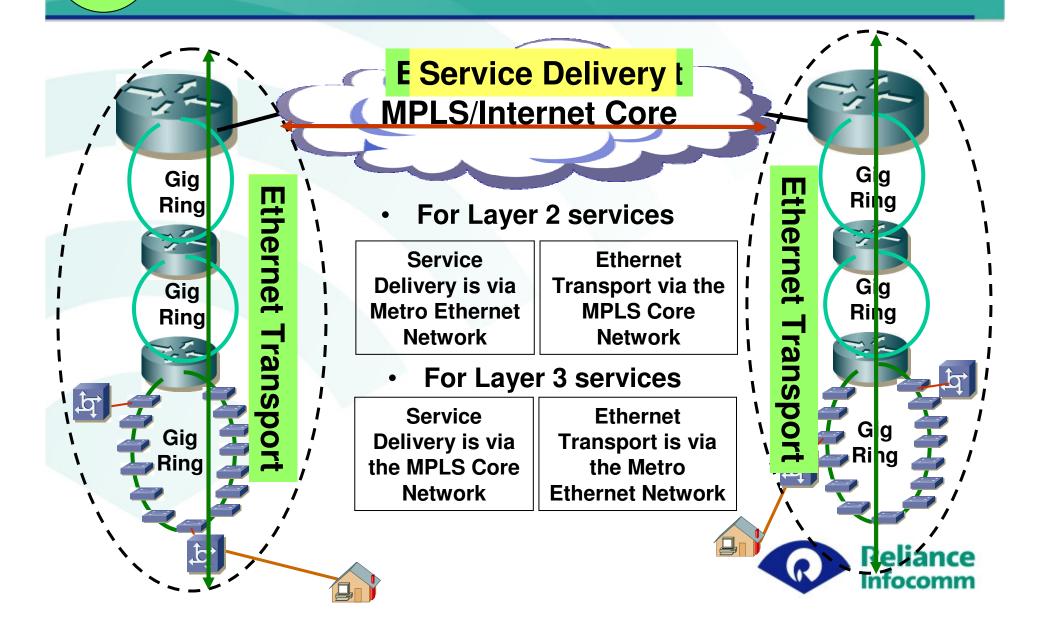

- Routed/Switched Ethernet
 - Ethernet as Service and Transport
 - Easier to implement in greenfield operators
 - Start off with Ethernet based transport
 - More cost efficient and bandwidth efficient
 - Lot more statistical multiplexing of user bandwidth can be in bandwidth chunks that have nothing to TDM transport
 - More like ATM networks

Architectural Choices An Architecture Ensuring Service Adaptability & Reliability

Do! Keep a clear separation between layers

Keep a clear separation between layers Why ?????

Do!

Lb

Gig

Ring

T

Gig

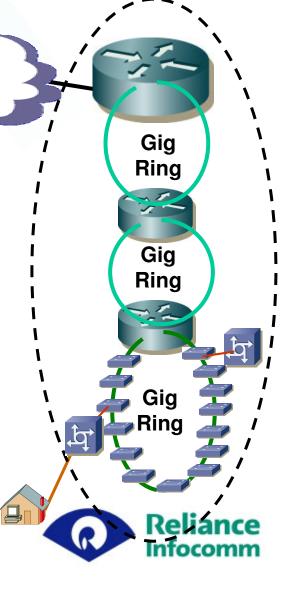

Ring

Gig

Ring

MPLS/Internet Core

- Clearer service and network interconnects
- Clearer planning and engineering
 - Easier Addressing and protocols design
- Clearer operations and administrative domains
 - Easier Provisioning
 - Easier Operation and Maintenance

Have a design with protocol scaling Metro Ethernet is a Numbers Game !!!!!

MPLS/Internet Core

Routing Protocols

Do!

.b

Gig

Ring

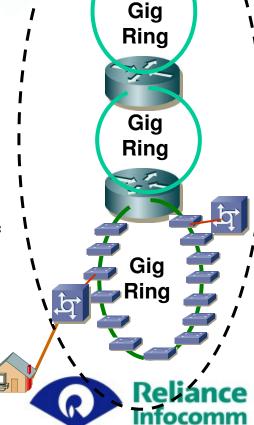

Gig

Ring

Gig

Ring

- Separate routing protocols design between the CORE and ACCESS
 - Scalability is the major driving factor in this !!!
 - Reduction in the number of router loopbacks in the networks
 - Use the same design principles, but don't combine them

Have a design with protocol scaling Metro Ethernet is a Numbers Game !!!!!

MPLS/Internet Core

Signaling Protocols

Do!

Ĵ

Gig

Ring

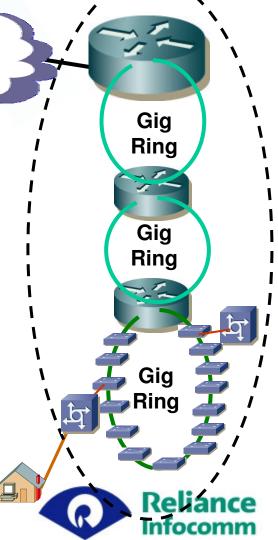

Gig

Ring

Gig

Ring

- Control the amount of state that needs to maintained in the CORE Network
 - Scalability is the major driving factor in this !!!
 - Tradeoff between path protection and state
 - Look for point at which protection failure is minimized

Have a design with user scaling Metro Ethernet is a Numbers Game !!!!!

MPLS/Internet Core

Do!

Б

Gig

Ring

Gig

Ring

Gig

Ring

Expanding the Layer 3 core vs. scaling the Access Layer 2 domain is a balancing act Giq

Ring

Giq

Ring

Gia

Ring

Reliance

Infocor

- Moving the Layer 3 network
 closer to customers increases
 the size and management of
 the core Layer 3 network
- Increasing the number of L2 circuits to the MCN increases the complexity in the Metro Network
- Have a design goal at which moving Layer 3 closer to the customer make sense

Centralize the Service Creation Metro Ethernet is Number Game !!!!

Layer 2 circuits

Gig

Ring

1

Gig

Ring

Gig

Ring

1.

 Centrally Provisioned & Centrally Computed Paths Giq

Ring

Giq

Ring

Giq

Ring

Reliance

Like ATM PVCs

- Centrally Provisioned & Distributed Computed Paths
 - Like ATM SPVCs

Centralize the Service Creation Why is this bad !!

Gig

Ring

T

Gig

Ring

Gig

Ring

b

MPLS/Internet Core

Centrally Computed Paths

- Ok in a small number of paths
 - All state of the connections are centrally held

Giq

Ring

Giq

Ring

Giq

Ring

Reliance

- In failure conditions, new path computation need to occur on all connections at a central point
- just a scaling nightmare !!!

Forget about NMS/OSS/BSS Integration

Giq

Ring

Giq

Ring

Gia

Ring

Reliance

Service Fulfillment Time

Gig

Ring

Gig

Ring

Gig

Ring

Б

MPLS/Internet Core

- Integrated Process and workflow before service rollout
 - Key metrics to measure operations against
- Mean Time to Provisioning
 - Have a efficient workflow to optimize customer turn up
 - Figure out the interactions between various network layers before hand
 - Flow through provisioning is a good goal !!!

Forget about NMS/OSS/BSS Integration

Service Assurance Time

Gig

Ring

Gig

Ring

Gig

Ring

Б

MPLS/Internet Core

Mean Time Between Failures

- Build in the appropriate level of redundancy in the network balancing cost
 - City Head End Redundancy
 in the Metro Network
 - Ensures that an entire city is not lost because of a node failure

Giq

Ring

Giq

Ring

Gia

Ring

Reliance

- Redundant paths to prevent loss of service because of fiber or infrastructure glitches
- Sufficiently redundant
 MPLS/Internet Core

Forget about NMS/OSS/BSS Integration

Service Restoration Time

Gig

Ring

Gig

Ring

Gig

Ring

b

MPLS/Internet Core

Mean Time to Repair

- Create a suite of troubleshooting tools to help isolate network problems both from a the NOC and the field
 - In the layer 2 domain
 - Mac Ping, LSP ping

Giq

Ring

Giq

Ring

Gia

Ring

Reliance

 Have a sparing strategy that is cost efficient but allows the MTTR provided in your SLAs

Use Proprietary solutions

Gig

Ring

Gig

Ring

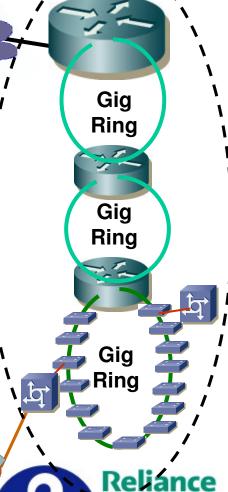

Gig

Ring

Б

MPLS/Internet Core

- Design a standard's based networks
 - Allow for easier
 - Migrations
 - Cost Reductions Models
 - IF forced to deploy any non standard solutions clearly work out the interoperability points in the network
 - This is easier said and designed than implemented

Summary

- Do's
 - Separate the layers in the network
 - Layer 2 and Layer 3 Services
 and Transport Networks
- Play the Numbers Game of Scaling
 - Protocol Scaling
 - Routing
 - Signaling
 - User Scaling

- Don't's
 - Centralize Service Creation
 - Forget about the OSS and BSS integration
 - Service Provisioning Time
 - Service Assurance Time
 - Service Restoration
 - Use proprietary solutions

Nothing earth shattering here ! Just applying things that we have learnt before !!
