

Toward the Internet 2.0

Hiroshi Esaki, Ph.D.

Professor, The University of Tokyo

Vice President, JPNIC(Japan Network Information Center)

Executive Director, IPv6 Promotion Council of Japan

Board member, WIDE Project

Board of Trustee, ISOC

Important activities by ISOC

- **“IPv6 is critical issue”** to resolve, i.e., deployment of IPv6 is very important

<http://www.isoc-ny.com/for>

as **OECD and IGF (Internet Governance Forum)** to

2. Officially Identify as the major strategic initiative

“Trust and Identifier

Resolution on December

IPv6 deployment & IPv4 Address Depletion

Japanese MIC formed study group

- Mission: “How to achieve smooth IPv6 introduction”
- Some interesting discussion and analysis
 - There is no free lunch ! All must pay money on IPv6.
 - Squeezing out the global IPv4 address from existing network looks so hard.... JPNIC had got less than 2% of address space.....
 - IPv4 address exchanging market may generate the company accounting issue, since IPv4 address may become as an asset.
 - Broadband Internet consumes a lot of global IP(v4) addresses
 - RIPE is large IPv4 address consumption as well as BRICs area

Japanese MIC formed study group

- Mission: “How to achieve smooth IPv6 introduction”

2. The largest sacrifice is business/service deployment for “new” companies and for “legacy” companies
4. Contents provider and system integrator should/must join, see the Google’s IPv6 site

RIPE is large IPv4 address consumption as well as BRICs area

Japanese MIC formed study group

group

- Mission: "How to achieve smooth IPv6

1. We may need carrier-class NAT boxes in the network.

But, serious technical issue will occur, regarding the number of TCP sessions.....

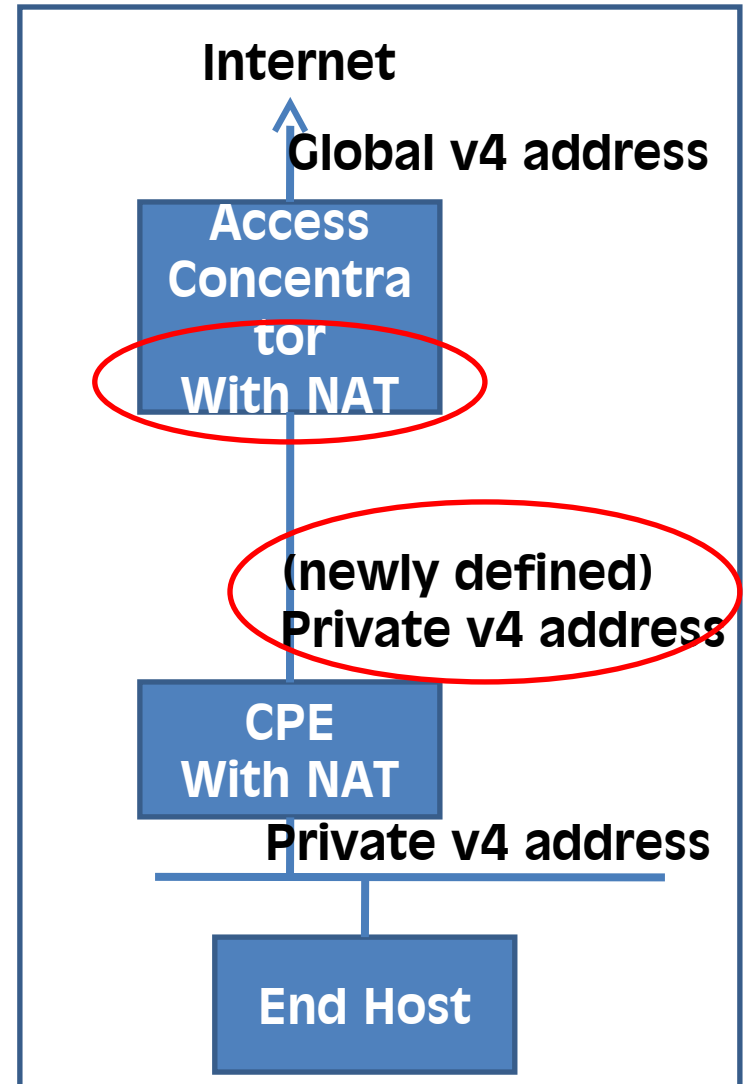

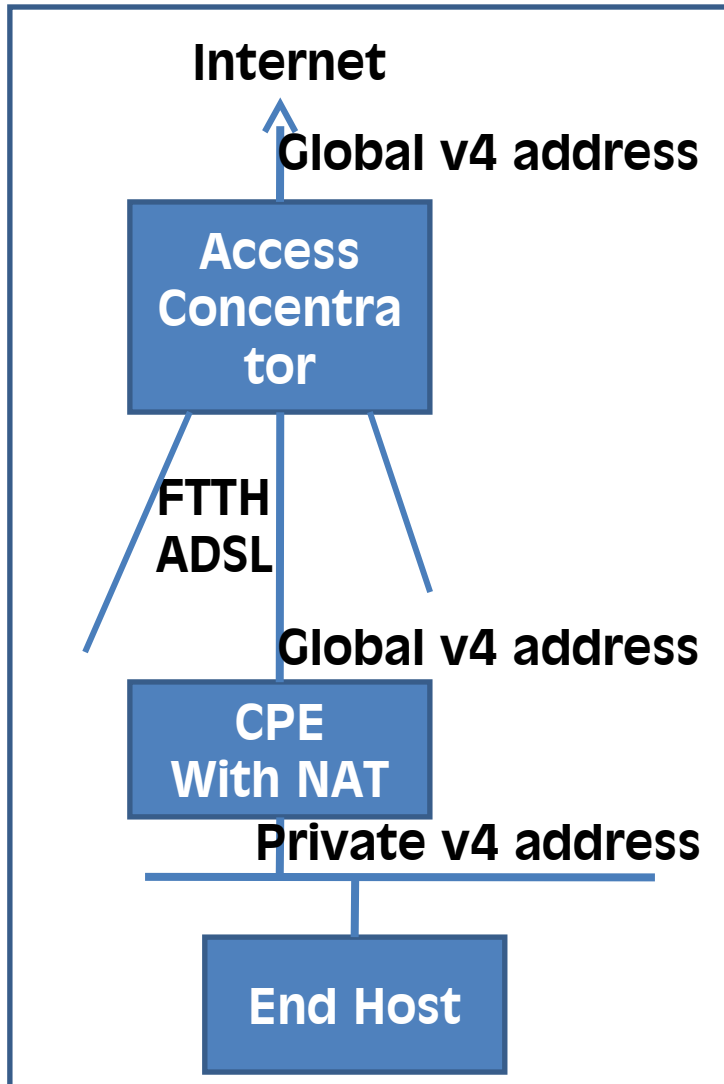

RIPE is large IPv4 address consumption as well as BRICs area

NAT can not help you

NTT Communications
Shin Miyakawa, Ph.D

Introduction of "Carrier-Grade NAT"

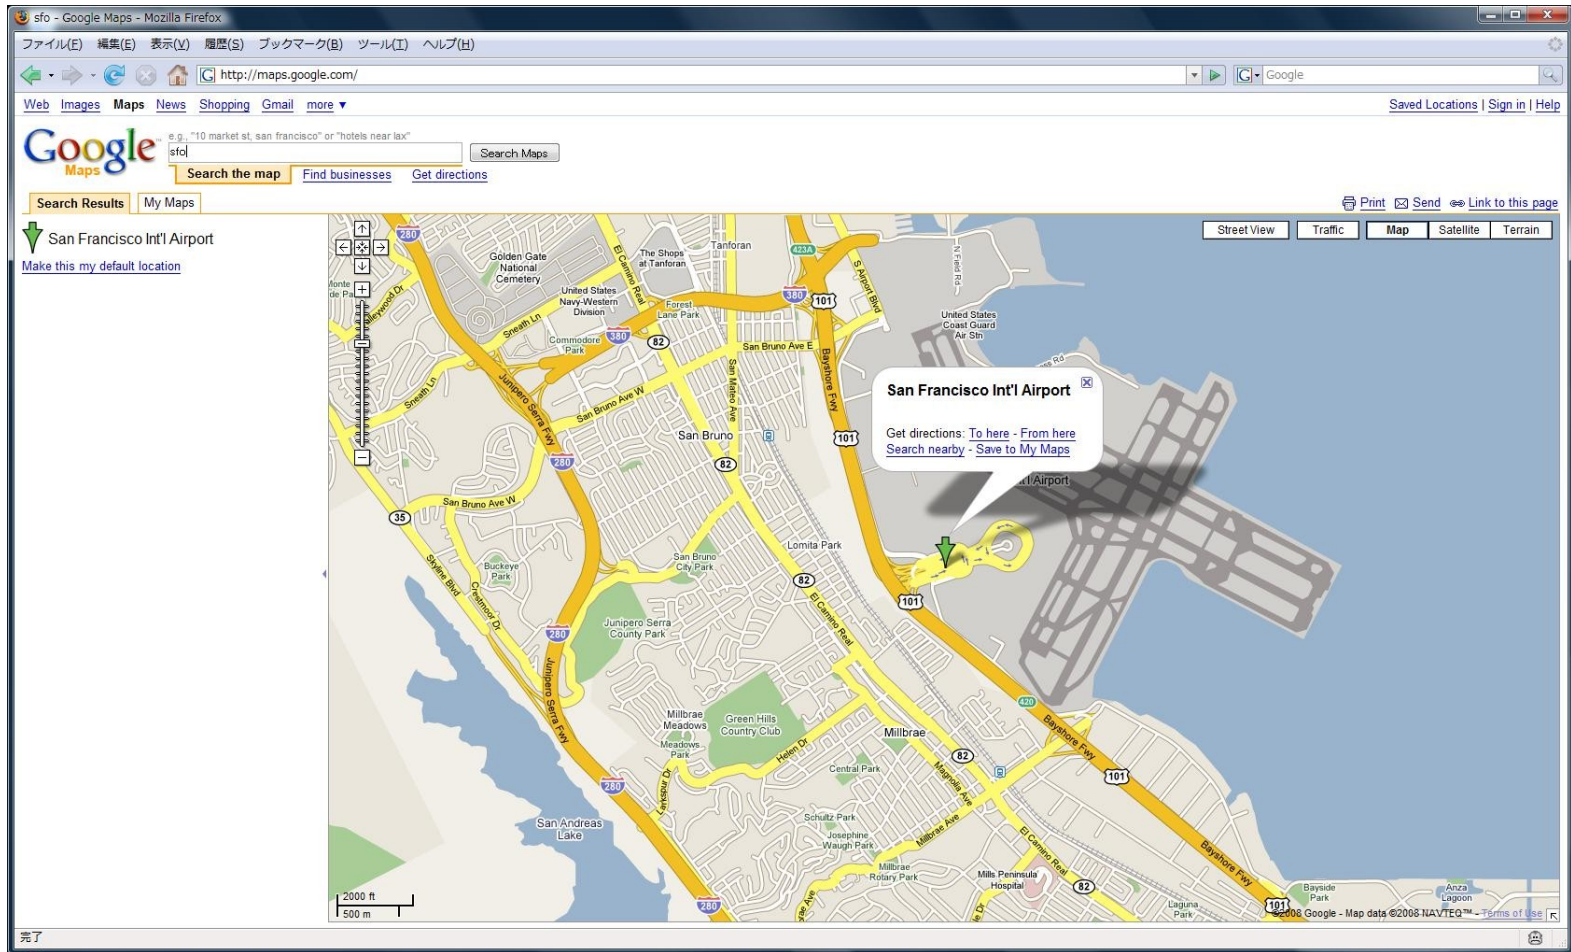

However.....

- **Limitation** on the number of session states for NAT operation
 - Each user could use certain number of sessions
 - How many sessions ?
 - Even as the best case, **65,536** is the maximum number of sessions, **shared by customers** accommodated into a single IPv4 address
 - When the number of users is **2,000**, it will be **only 30 sessions**
- This means.....

Limitation of NAT Solution

Max 30 Connections

Max 20 Connections

The image is a screenshot of a web browser displaying Google Maps. The browser's address bar shows the URL <http://maps.google.com/>. The search bar contains the text "sfo". Below the search bar, there are buttons for "Search the map", "Find businesses", and "Get directions". The map itself shows the San Francisco area, with San Francisco International Airport highlighted by a green arrow and a white popup box. The popup box contains the text "San Francisco Int'l Airport" and links for "Get directions: To here - From here", "Search nearby", and "Save to My Maps". The map includes various landmarks, parks, and roads, with a scale bar at the bottom left showing 2000 feet and 500 meters. The browser's status bar at the bottom left shows the Japanese characters "完了" (Completed).

Max 15 Connections

The image is a screenshot of a Mozilla Firefox browser window displaying Google Maps. The address bar shows the URL <http://maps.google.com/>. The search bar contains the text "sfo". The map shows the San Francisco area, with San Francisco International Airport highlighted. A white speech bubble with a green arrow points to the airport, containing the text "San Francisco Int'l Airport" and "Get directions: [To here](#) - [From here](#) [Search nearby](#) - [Save to My Maps](#)".

Overlaid on the map are several semi-transparent grey boxes with the following text: "We are sorry, but we don't have maps at this zoom level for this region. Try zooming out for a broader look." This message is repeated in multiple locations across the map, indicating a technical limitation at the current zoom level.

At the bottom left of the map, there is a scale bar showing 2000 feet and 500 meters. At the bottom right, there is a copyright notice: "©2008 Google - Map data ©2008 NAVTEQ™ - Terms of Usage".

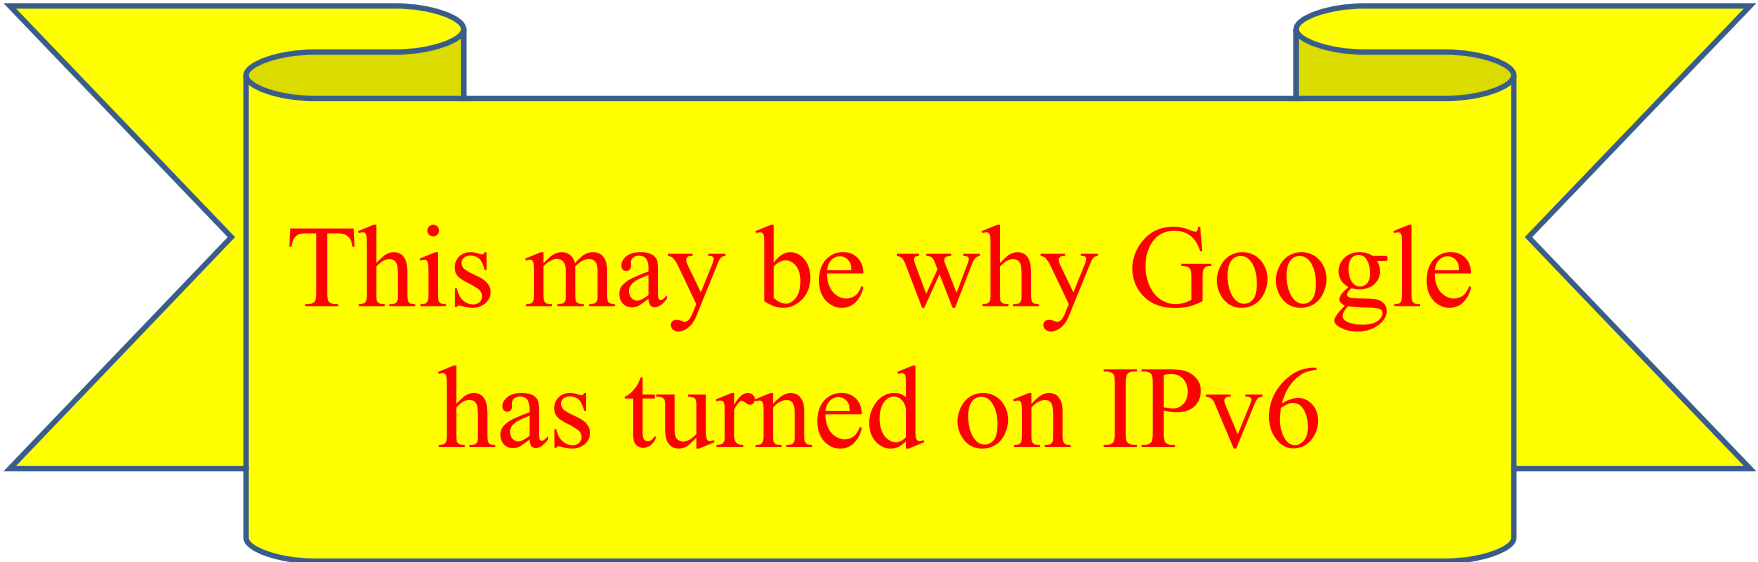

At the very bottom of the browser window, there is a small text line: "mt3.google.com からデータを転送しています..."

Max 10 Connections

The screenshot shows a Mozilla Firefox browser window displaying Google Maps. The address bar contains <http://maps.google.com/>. The search bar has the text "sfo" and a search button. Below the search bar, there are buttons for "Search the map", "Find businesses", and "Get directions". The map shows San Francisco with a callout for "San Francisco Int'l Airport". The callout includes a green arrow pointing to the airport location and text: "San Francisco Int'l Airport", "Get directions: [To here](#) - [From here](#)", and "[Search nearby](#) - [Save to My Maps](#)". The map also shows various streets, landmarks like "United States Coast Guard", and a scale bar at the bottom left indicating 2000 ft and 500 m. The bottom right corner of the map area contains copyright information: "©2008 Google, Inc. All rights reserved. ©2008 NAVTEQ™ - Terms of Use".

Max 5 Connections

A yellow ribbon graphic with a central rectangular box containing text. The ribbon has a 3D effect with a blue outline and a yellow fill. The text is in a red, serif font.

This may be why Google
has turned on IPv6

Some examples of major Web site

Application	# of TCP sessions
No operation	5 ~ 10
Yahoo top page	10 ~ 20
Google image search	30 ~ 60
ニコニコ動画	50 ~ 80
OCN photo friend	170 ~ 200+
iTunes	230 ~ 270
iGoogle	80 ~ 100
楽天 (Rakuten)	50 ~ 60
Amazon	90
HMV	100
YouTube	90

**Task Force
coming up with IPv4
Depletion
Kicked off on September 2008**

<http://kokatsu.jp/index.html>

Founding Organizations

- IPv6普及・高度化推進協議会 (IPv6 Promotion Council)
- 財団法人インターネット協会 (IAJapan)
- 次世代IX研究会 (DISTIX)
- 情報通信ネットワーク産業協会 (CIAJ)
- 社団法人テレコムサービス協会 (テレサ協)
- 社団法人電気通信事業者協会 (TCA)
- 財団法人電気通信端末機器審査協会 (JATE)
- 社団法人日本インターネットプロバイダー協会 (JAIPA)
- 社団法人日本ケーブルテレビ連盟 (JTCA)
- 社団法人日本ネットワークインフォメーションセンター (JPNIC)
- 日本ネットワーク・オペレーターズ・グループ (JANOG)
- 日本 UNIX ユーザ会 (JUS)

Two important messages;

- 1. Even if you have large IPv4 addresses, you must be suffered**
- 2. There are a lot of IPv6 Ready equipments, thanks VISTA (and Windows7) and Mac OS X**

Premise and Our Mission

IPv4
EXHAUSTION

- “Migration to IPv6” is **not** our primary mission.
But, “Correspondence against the IPv4 address depletion is our mission”.
- Premise ;
 - ✓ In about 2 or 3 years, you will experience the difficulty to obtain the global IPv4 address.
 - The most suffering player and area is for the introduction of **new business** and for the **expansion of business**.
 - ✓ All the stakeholder will be suffered.
 - We need the collaboration and harmonization among stakeholders.

Recognized Stakeholders

- System Owner (Public and Private Sector)
- System Integrator
- Hosting, ASP
- System Operator (out-source, self-operation)
- Network Provider
- ICT Equipment Vendor
- ICT Software developer/vendor
- End-User, e.g., residential customer
- Corporate user
- Analyst, investigator
- Educational Organization (e.g., university)

How you should implicate

- **As a Business Opportunity**
 - Innovation, revolution and creation of businesses regarding the system and network industry.
- **As a Risk Management**
 - Preferential treatment for the existing operators will be hard
 - Even existing operators (i.e., ISP, ASP) will experience the difficulties
 - Expectation to “IPv4 address trading market” would be of risk.
 - System network and service security

Message to ISP

IPv4
EXHAUSTION

- In order to provide the network connectivity for IPv6 only servers, ISP must carry IPv6 packets
- Carrier-Grade NAT is just transitional solution.
- **The system development/deployment against IPv4 address depletion is against the business risk.**
- **The cost for system development may be ought to be considered as a risk management..**

Message to IDC, ASP, CSP

- **Server operators will be suffered, first, since the server node needs global (IPv4) address.**
- **At least, after the IPv4 address pool depletion, the IDC that have available global IPv4 address would have better business superiority than the IDC that does not have.**
- **Many IDC companies and operators may not have correct technical understanding, and may anticipate the**

Action Items by the Task Force

- List up the issues to solve by each player
- Information sharing among related organizations
- Establish the Q&A center
- Design and operation of testbed
- Design and operation of education package
- Issues and it's solution of security during the transition process

Traffic measurement and analysis of Japanese commercial ISP Traffic

(*) Seven major ISPs in Japan has been

collaborated with us, i.e., OCN, KDDI,

Yahoo BB!, K-Opticom, Softbank

- Large contribution by residential customer traffic, small contribution by corporate networks
- Total traffic volume in Japan (2007)
 - Internet → Home : 998.4 Gbps
 - Home → Internet : 689.5 Gbps

International Incoming traffic is exception; steep increase

[note]
 A=Residential customers
 A1: Broadband users
 A2: Non-Broadband users
 B=Non-residential customers
 B1: Traffic exchanged through IXes
 B2: Traffic exchanged private peerings
 B3: Oversea traffic

Weekly Broadband customer traffic for three years

<< Uploading traffic : Customer → Network >>

<< Downloading traffic : Network → Customer >>

Weekly International Traffic Volume for three years

<< Current traffic volume >>

1. Incoming(import) traffic dominates outgoing(export) traffic
2. Large variation in incoming, i.e., interactive traffic

amplitude increases significantly. Due to interactive

<< In Mirroring or caching in Japan may improve this situation

Mirroring or caching in Japan may improve this situation

<< Outgoing traffic ; Japan → Overseas >>

Which is a headache for ISP, P2P, or Interactive

P wave seems to have small amplitude
Amplitude of wave by interactive traffic seems to be

User Density versus Total Traffic Volume per Customer

User Density versus Total Traffic Volume per Customer

protocols/ports ranking

classify client-type/peer-type with the

More than 80% of TCP session does not use Well-Known Port

protocol	port	2005			2008		
		total (%)	client type	peer type	total (%)	client type	peer type
TCP	*	97.43	94.93	97.66	96.00	95.51	96.06
	(< 1024)	13.99	58.93	8.66	17.98	76.16	11.35
	80 (http)	9.32	50.78	5.54	14.06	64.96	8.26
	554 (rtsp)	0.38	2.44	0.19	1.36	8.21	0.58
	443 (https)	0.30	1.45	0.19	0.58	1.63	0.46
	20 (ftp-data)	0.93	1.25	0.90	0.24	0.17	0.25
	(>= 1024)	83.44	36.00	89.00	78.02	19.35	84.71

GRE		0.07	0.12	0.06	0.09	0.08	0.09
ICMP		0.01	0.05	0.01	0.02	0.05	0.02

Yet, another important fact is;
large number of TCP /UDP
connections are established by
every single end-station

Internet and ICI have change the world

- some legacy and old conventional wisdoms -
- User and end-station is poor and stupid
- Users' terminal only turns on, when it's needed
- Fixed terminal is far major and superior than mobile nodes
- “Service” must be provided either by provider or by enterprise.
- Cost of transmission, store and copy, is

Unaware technical evolution ?

- **Two of drastic cost down in ICT**
 - Copying
 - Recording and saving
- **However, logistics of information may not be aware of this evolution...**
 - ...
 - Have BitTorrent or Joost been awared ?
 - BB-TV! by SoftBank YBB has operated, silently...

October 11, 2006.

Play-off game of professional baseball, Hokkaido Nihon Ham Fighters versus Fukuoka Softbank Hawks.

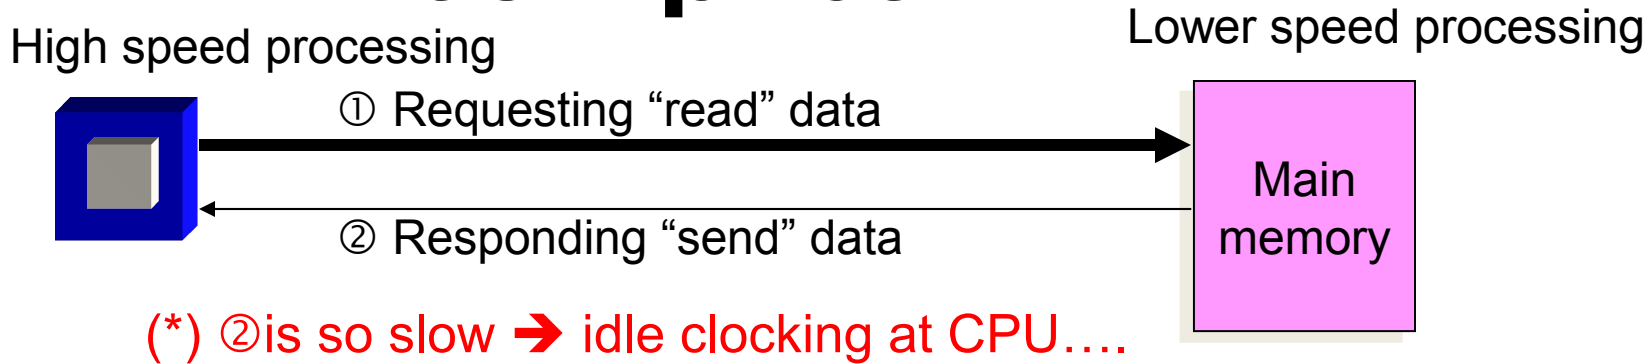

P2P Technology contributes to more than 80% cost reduction for bandwidth capacity at server site in iDC.

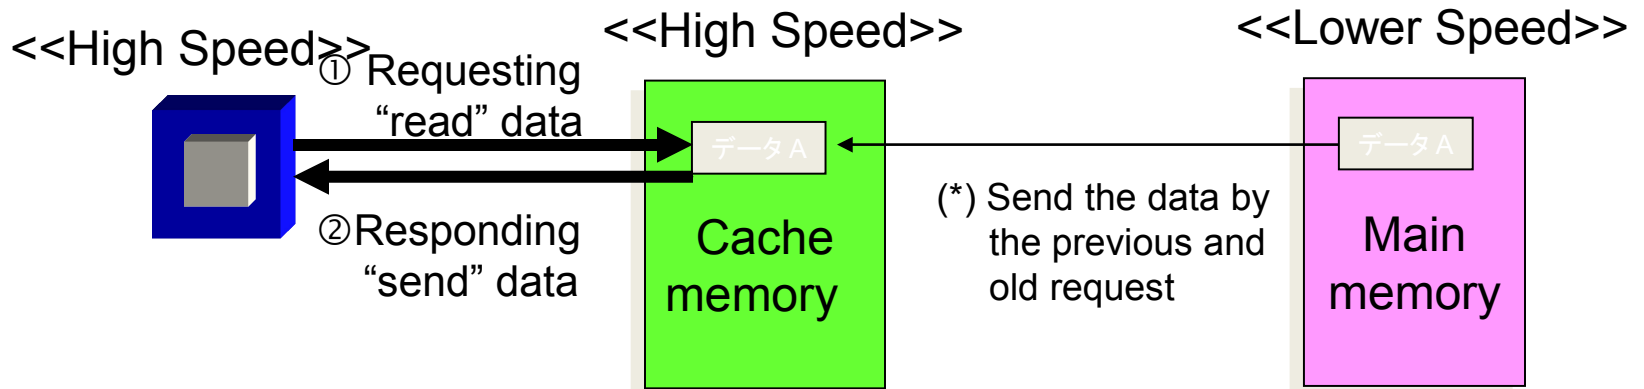

What has Peer-to-Peer introduced ?

1. {networked} Cache and Proxy
2. {networked} DMA (Direct Memory Access)
3. {networked} Virtual memory system (by DHT)
 - Separate contents handler(identifier) and real storing address
 - Access heterogeneous and multiple device with single {virtual} interface
4. Abstraction of contents by number (by DHT)

Cache memory in computer

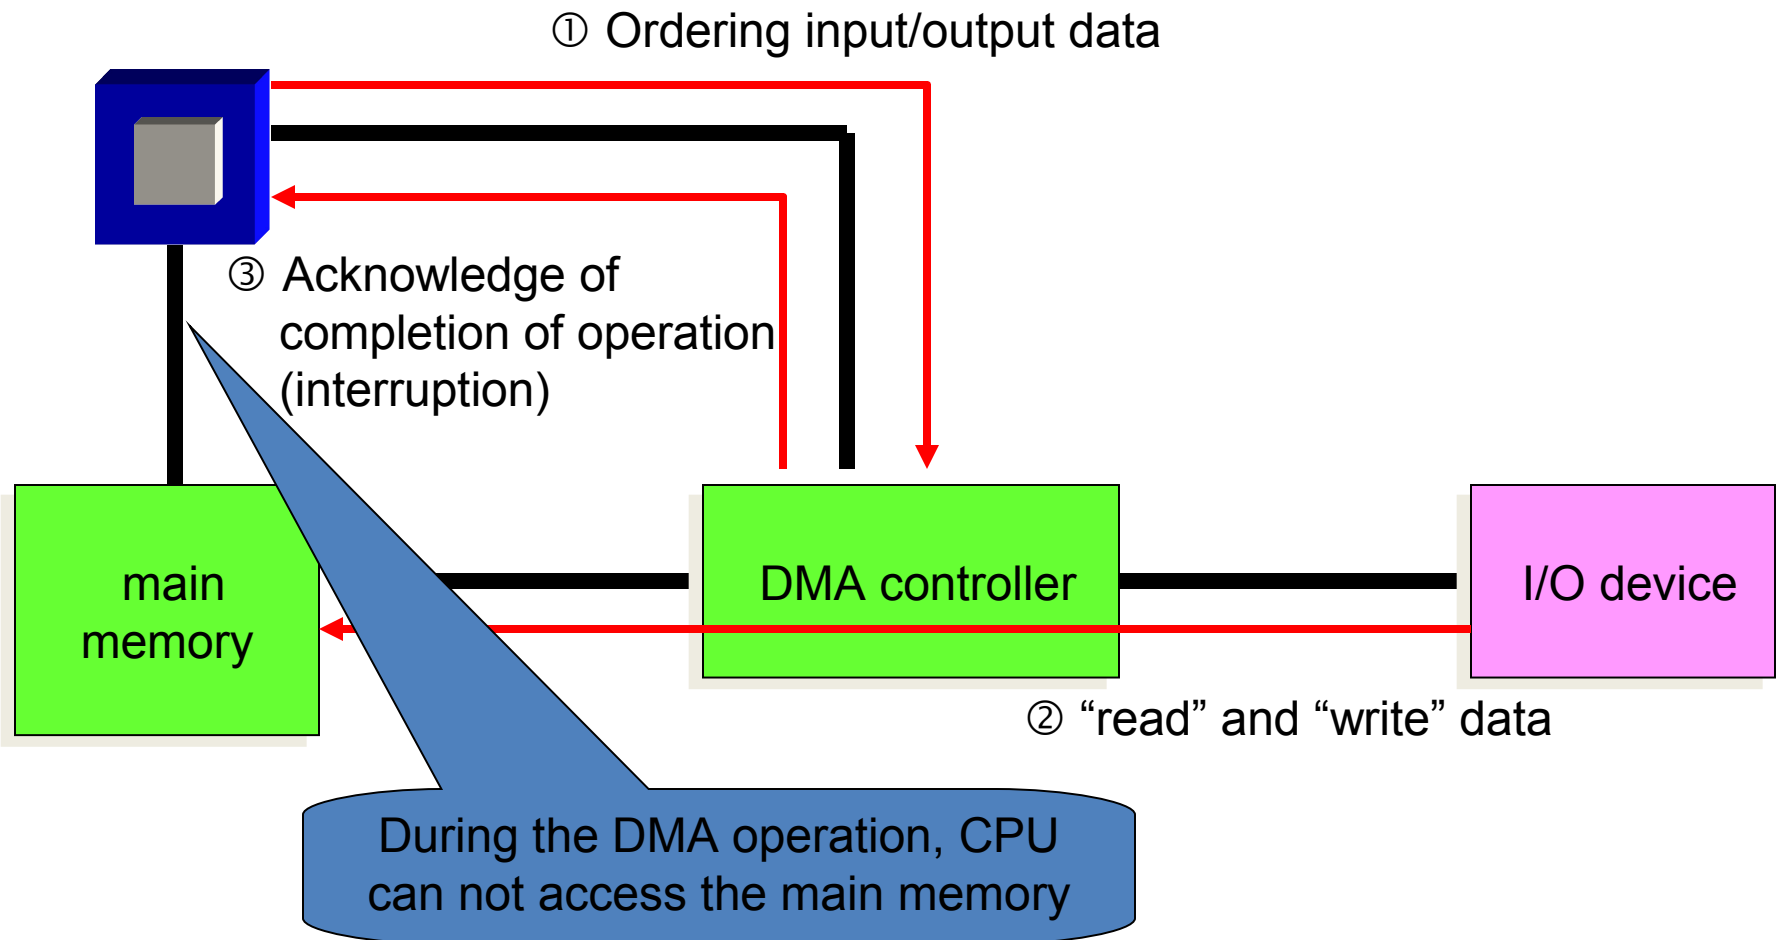

Introduction of cache memory system

What has Peer-to-Peer introduced ?

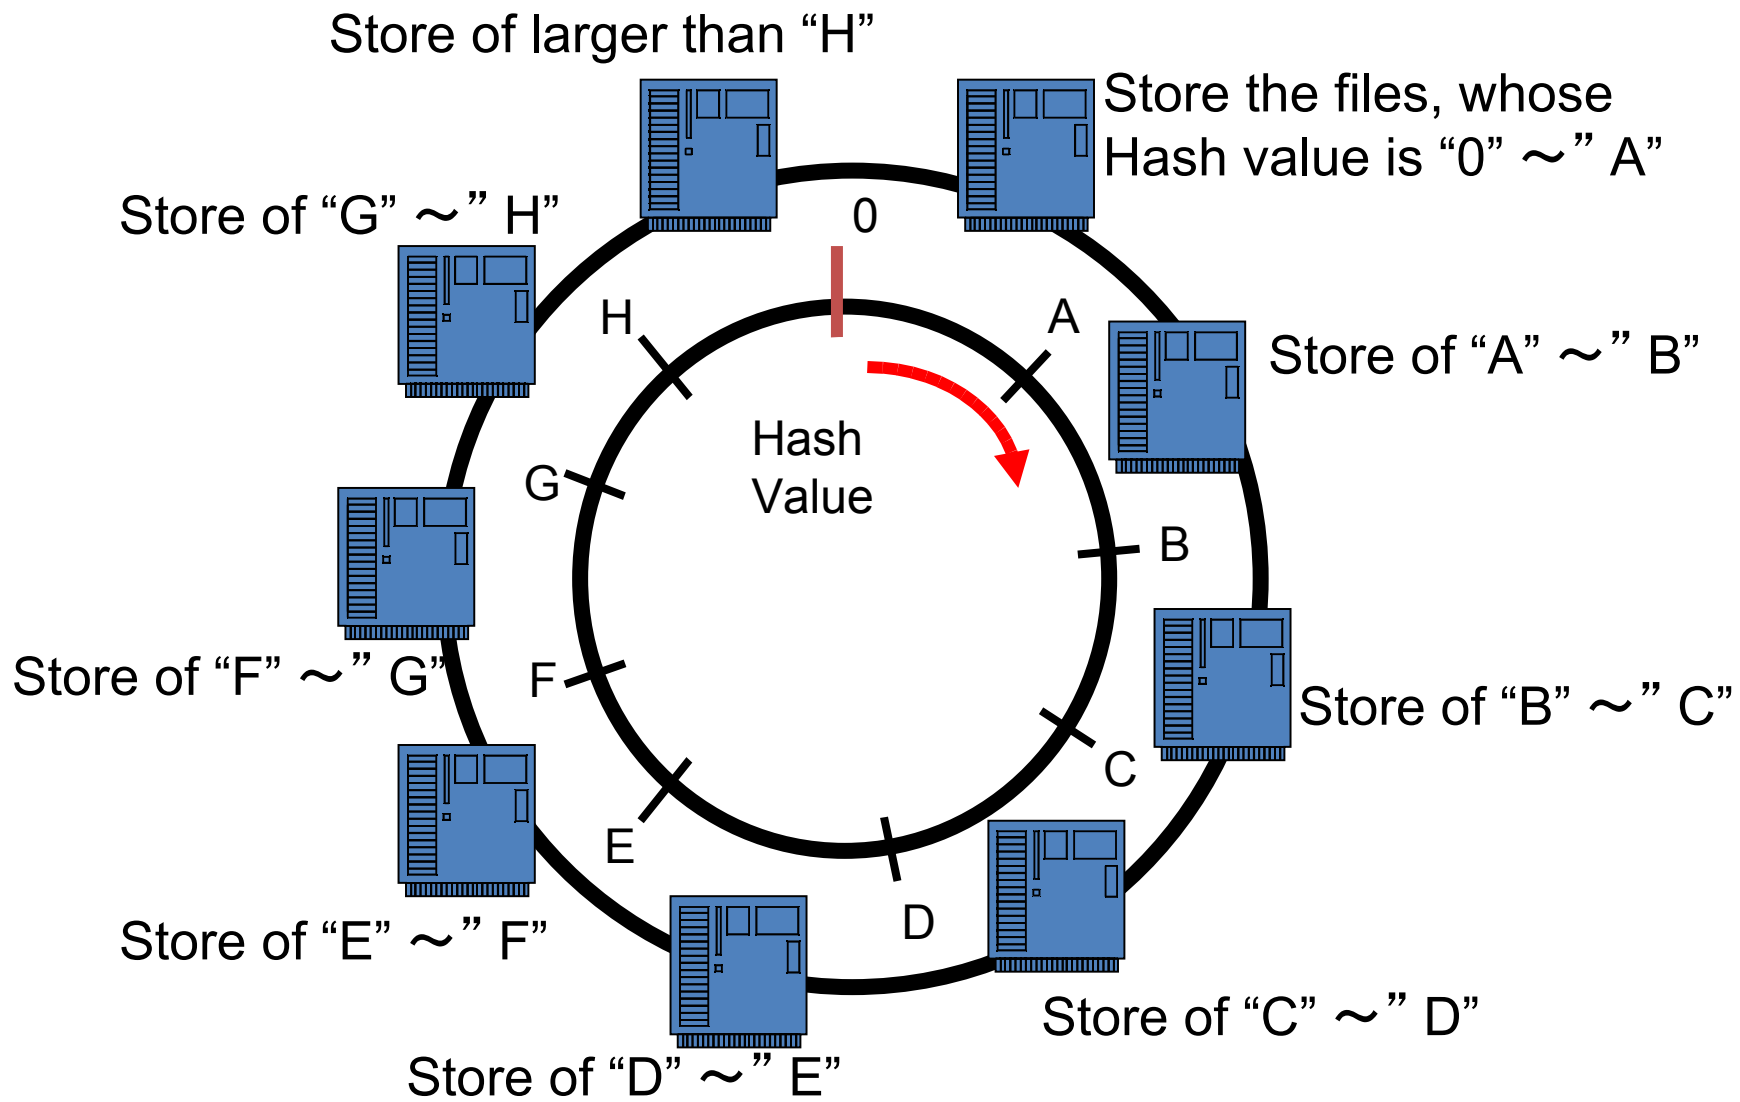

- {networked} Cache and Proxy
 - {networked} DMA (Direct Memory Access)
 - {networked} Virtual memory system (by DHT)
 - Separate contents handler(identifier) and real storing address
 - Access heterogeneous and multiple device with single {virtual} interface
- ## 4. Abstraction of contents by number (by DHT)

DMA; Direct Memory Access

What has Peer-to-Peer introduced ?

- {networked} Cache and Proxy
 - {networked} DMA (Direct Memory Access)
 - {networked} Virtual memory system (by DHT)
 - Separate contents handler(identifier) and real storing address
 - Access heterogeneous and multiple device with single {virtual} interface
4. Abstraction of contents by number (by DHT)

Distributed file storage image in DHT system

Challenge on P2P deployed in ISP

- Traffic engineering on P2P system

– Intra-domain

→ P4P ?

– Inter-domain

→ new routing

Collaborating with P2P Promotion Council

Reduce of Inter-Domain Traffic

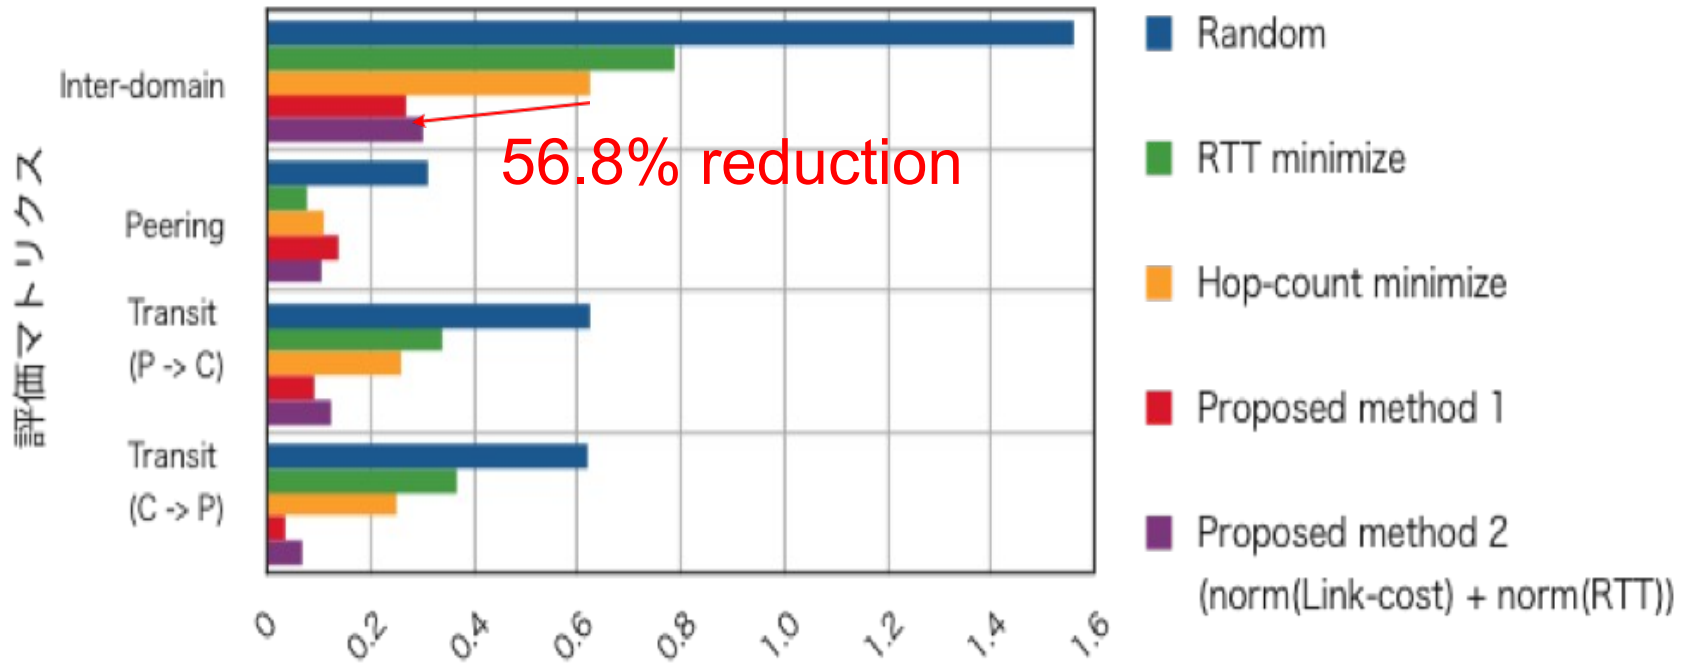

Fig. Inter-domain traffic

How the real network looks like ?

- 1. Covering our "Earth" with high speed network**
- 2. Impossible to accommodate earth with single technology**
- 3. Investment and operation is always autonomous**
- 4. We have large area, where we could not wire**
- 5. We have large area where, even, wireless would be hard to use**
- 6 Uni-Directional Digital Link**

**Toward the new
continent**

Why we go to new continent ?

- Contribution of revenue by ICT industry in the GDP is less than 10%.
- More than 90% revenue in GDP is come from non-ICT industries.
- Almost all the companies, including non-ICT industries, depends on ICT technology on their corporate operation.
- How to use the ICT defines the marketing power and operating power of companies

Flagship Projects

1. Facility Networking for energy saving
2. Live E! ; Weather Sensor

How to use the sensor network e.g., saving energy in building system

1. Energy saving and preserving the Earth is now "Global" agenda, while there is an economical benefit and incentive for private companies.
2. Integration of separated sub-systems, e.g. Air-conditioning, lightening, security, IT.

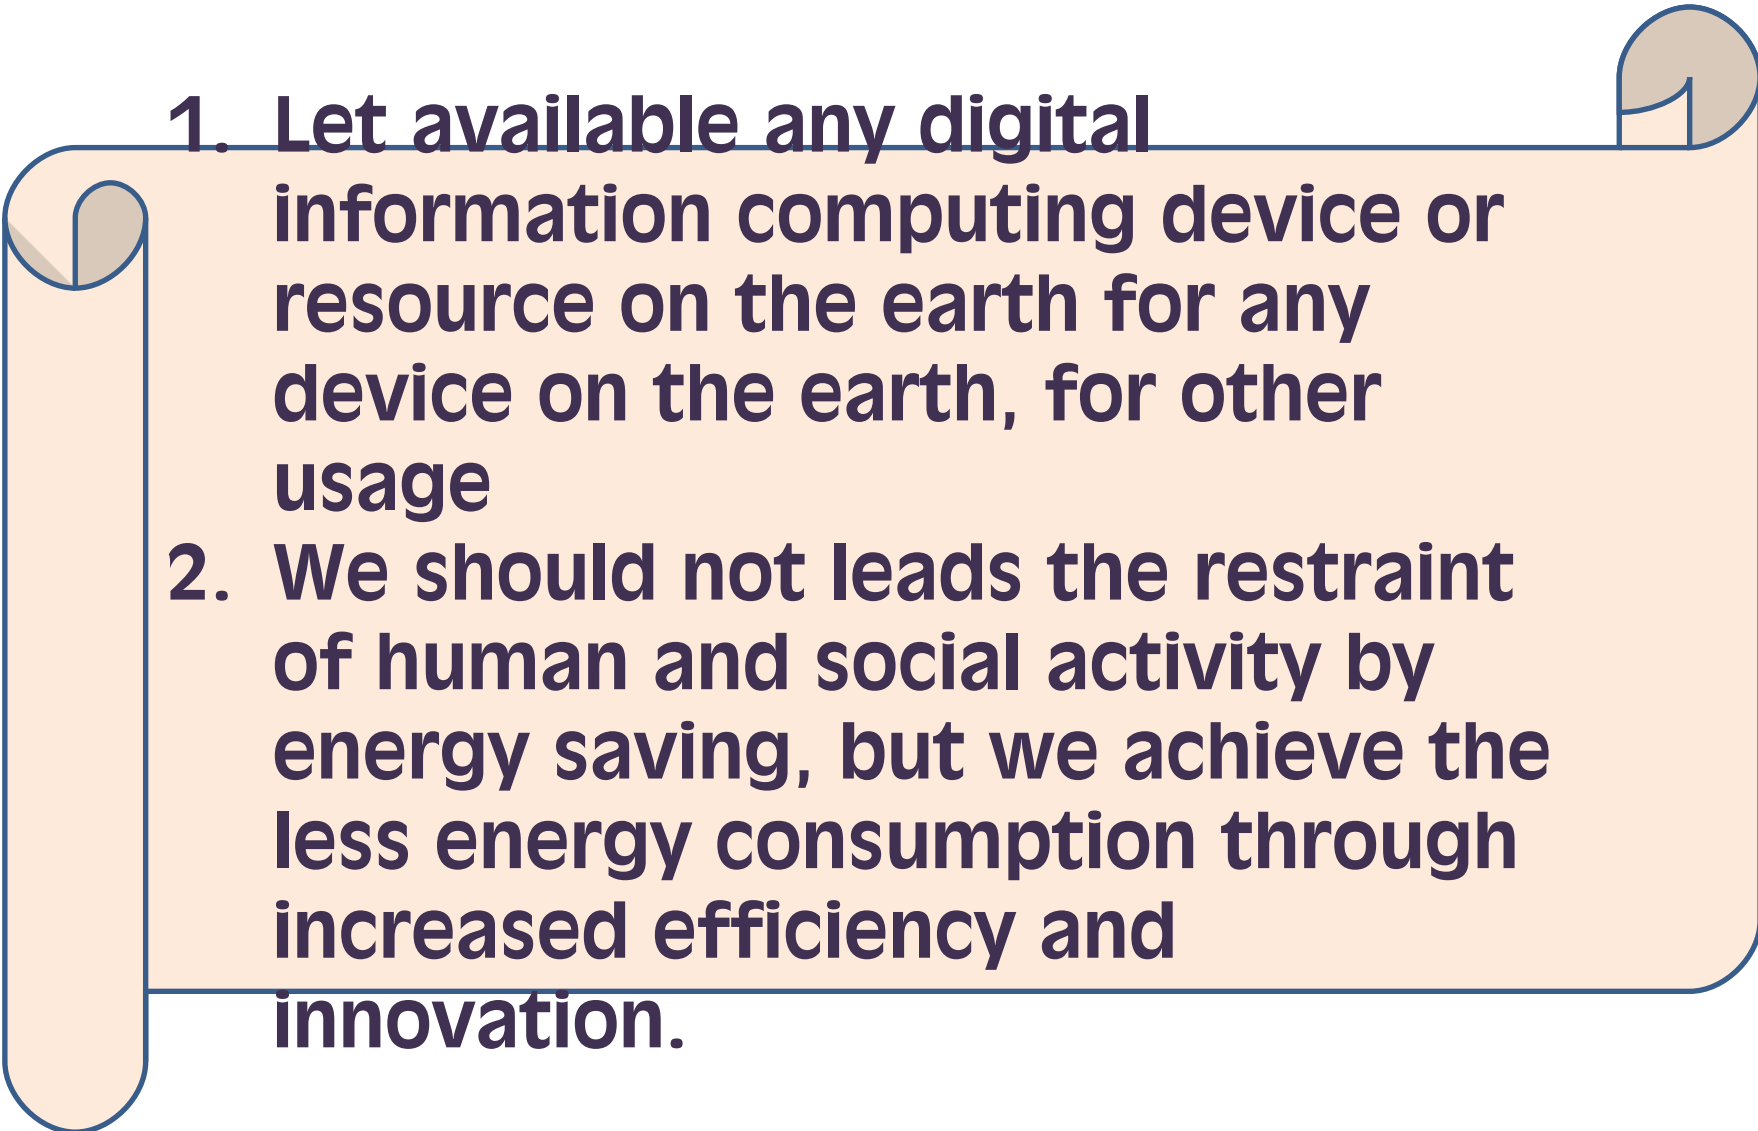

➔ Let it with open TCP/IP technology (i.e., IPv6)

- CO2 in United Nation

- 10%

Large number of sensors/actuators, and they do not care about the version of IP and protocol

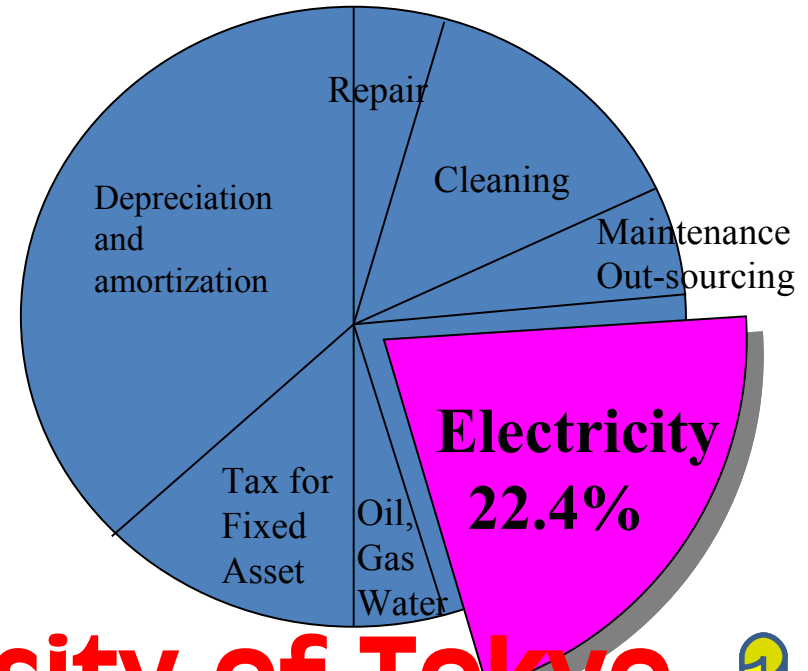

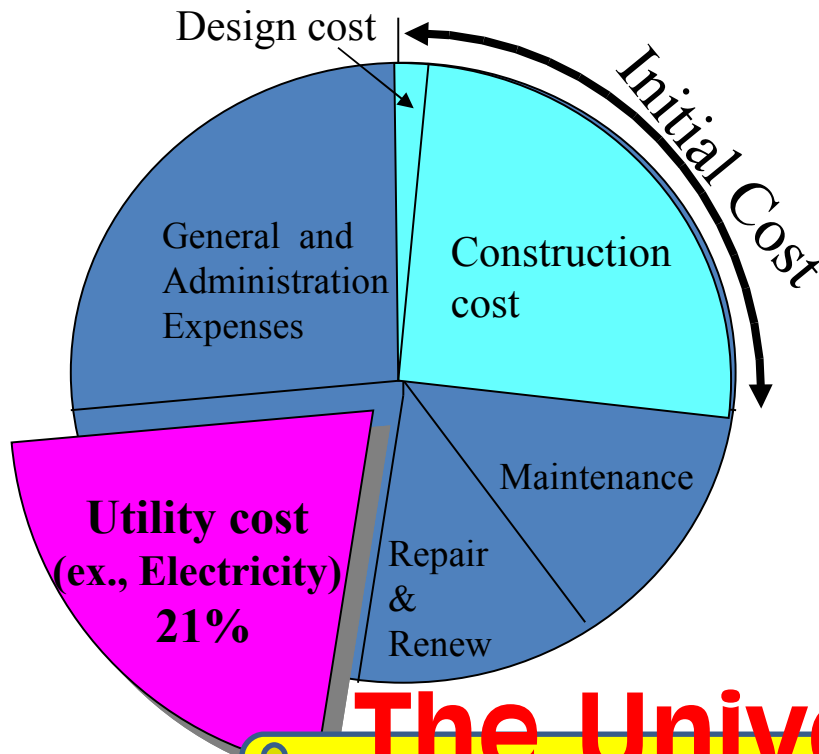

- 
- 1. Let available any digital information computing device or resource on the earth for any device on the earth, for other usage**
 - 2. We should not leads the restraint of human and social activity by energy saving, but we achieve the less energy consumption through increased efficiency and innovation.**

Life-time cost in Building System

Life time portfolio
(in office building)

Yearly portfolio
(in office building)

**The University of Tokyo
pays \$60M/year on
Electricity !!!**

Business in FY2007 and 2008

- 2007

- Integration with Digital Home Appliances
- TV set by Panasonic works as window for facility control and management in residential area
- Live E! WS at APNG Camp (Aug.2007)

- 2008

1. Beijing Olympic Game 2008

2. Energy Saving Field Trial in the Univ. of Tokyo

3. Live E! WS deployment in As

Beijing Olympic 2008 Main Stadium District Lighting System Control by IPv6 Facility Manage & Control

Operated by Matsushita Electric Works (MEW)
<http://www.mew.co.jp/e/corp/index.html>

Lightening Management & Control

- Using IPv6 based Facility Networking
- Area Management System, i.e., not single facility but multiple facilities
- 1.4kmx2.4km with 18,000 lights
- 340 IPv6-based control nodes
- 10% Energy saving

Special Project at the Univ. of Tokyo

- Building **“Green ICT Building”**
 - Targeted reduction;
 - 15%=\$4M USD (in 2012), 50%=\$30M USD (in 2030)
 - 12 floor high, R&D and R&E activities
 - Established October 2005, Start of Operation in March of 2006
 - More than saving energy
 - Forming R&D consortium

Metropolitan design; Real-Space Internet with IPv6

Source: Matsushita Electric Works

Innovation of Metropolitan Design Principle

- Foods (= Water)
- Religious (= Information (Authority, Wisdom))
- Exported goods (= logistics { +inform. })
- Transportation (= ship, train, car)
- Energy (= Coal, Atomic, Solar) and Information network

What is the impact/implication of Electronic Car ?

- Communication among car
 - Avoiding the traffic congestion
 - Virtual car-train
- Remove the combustion engine
 - Why car need long distance driving capacity ?
 - Car can be into the living

Innovation of Metropolitan Design Principle

Past requirements :

- Agriculture (river, canal)
- Manufacturing (logistics=train, road)

Future:

Control of “Energy and information flow” with ubiquitous energy sources

→ SCM of energy flow

What we (really) expected

- Win-Win relationship between Environment /Energy-saving and Ubiquitous networking

Step.1 Mandatory components

1. Sensors and actuators network
2. Collaborative operation among individual components

Step.2 Ubiquitous digital space sharing all the digital information

(*) Each equipments and components are

This is the "internet End-to-End Model"
