

IPv6 Deployment of KDDI

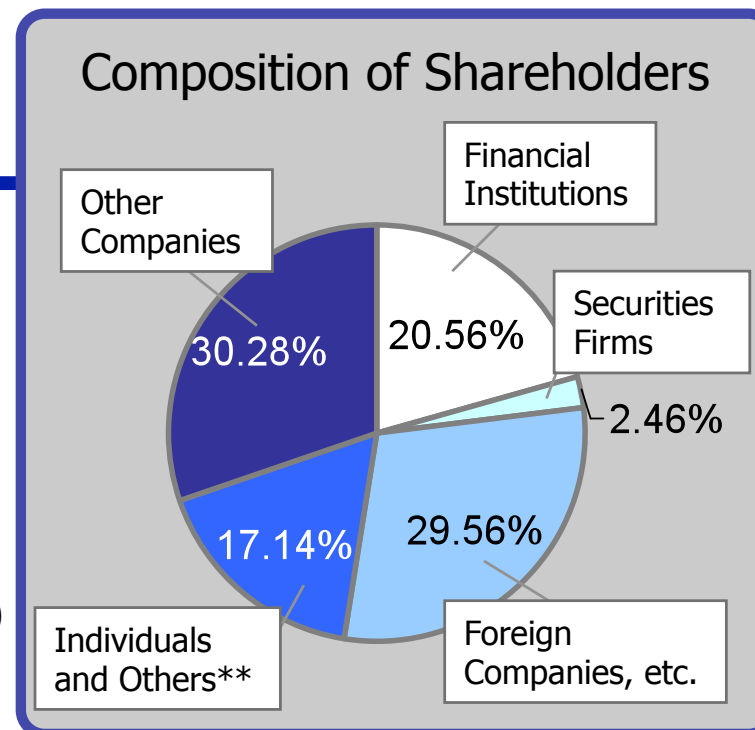

February 28th, 2012

**KDDI Corporation
Shigenari Saito**

- 1. Introduction to KDDI**
- 2. Making the decision of IPv6 deployment**
- 3. IPv6 deployment of “au HIKARI(FTTH)”**
- 4. World IPv6 Day and next action**

1. Introduction to KDDI

- **Date of Establishment** : June 1, 1984
- KDDI was established upon a three-company merger (DDI, KDD, IDO) in October 2000.
- **Capital** : 141,851 million
- **Number of Employees** : 19,290 (consolidated basis)
- **Ticker** : TSE 9433
- **Market Capitalization** : 2,404 billion yen(@536k yen)
- **Major shareholders** :
 - Kyocera Corporation : 12.76%
 - Toyota Motor Corporation : 11.09%

** Of which, own shares 13.3%

Note 1: As of November 30, 2011.

Note 2: Ratio of controlling share.

Note 3: The controlling stake % reflects only the acquired portion from TEPCO out of the total treasury stock reacquired on November 29 based on the shareholders' list as of September 30 2011.

Sales (FY2011.3)	Mobile	Fixed-line			Broadcast
		Local	Long-distance	ISP	CATV
<p>Designing The Future KDDI</p> <p>13.4 trillion mobile</p>	<p>au by KDDI (33.66M subs)</p> <p>UQ WiMAX (1.24M subs)</p>	<p>(au HIKARI) auひかり (1.5Msubs)</p> <p>TEPCO</p> <p>CTC</p>	<p>FTTH</p> <p>au one NET</p> <p>Merged in January 2007</p>	<p>JCN Became a subsidiary in June 2007</p> <p>J:COM Purchase of equity in February 2010</p>	
<p>NTT</p> <p>10.3 trillion</p>	<p>NTT DOCOMO (58.99M subs)</p>	<p>NTT E/W</p>	<p>NTT Communications</p> <p>NTT E/W</p>		
<p>SOFTBANK</p> <p>13.0 trillion</p>	<p>SOFTBANK MOBILE (26.90M subs)</p>	<p>SOFTBANK BB (ADSL/FTTH)</p> <p>SOFTBANK TELECOM</p>			

Note: () shows mobile subscriber number as of September 30, 2011.

are affiliated companies.

2. Making the decision of IPv6 deployment

KDDI studied IPv4 Exhaustion

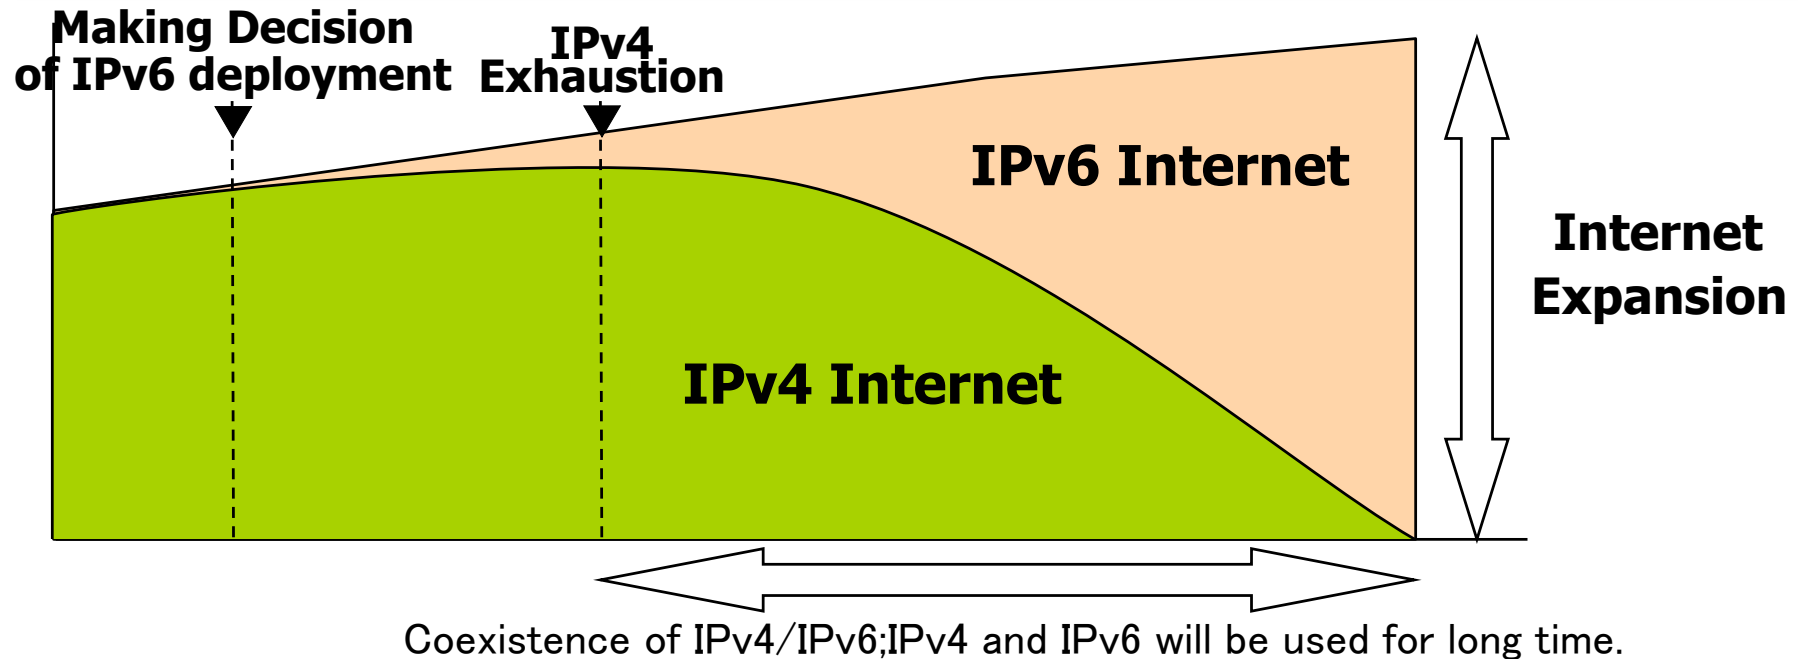

KDDI estimated that unallocated address pool would be exhausted in 2010 – 2012.

Internet is society's infrastructure.

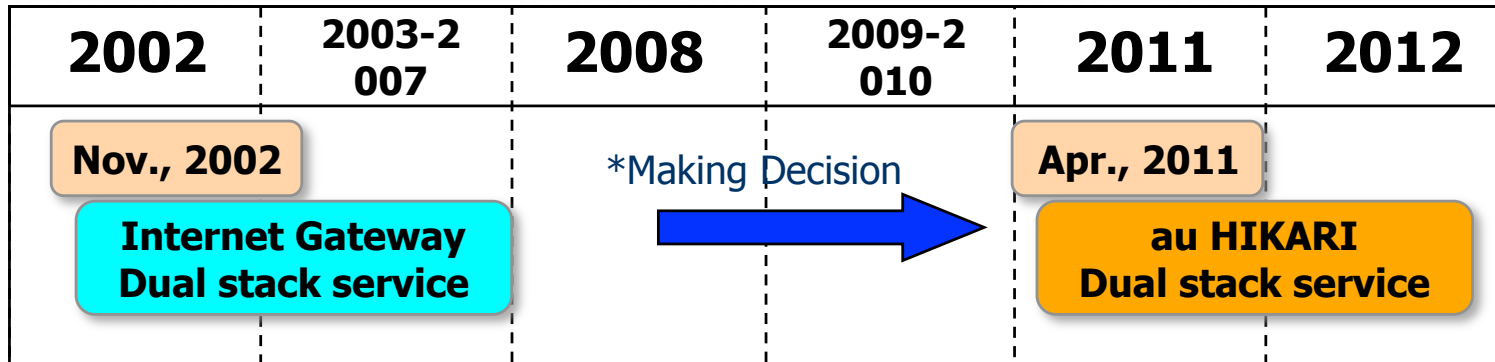

- Internet keeps expanding.
- Solution of IPv4 exhaustion
 - > Keep using IPv4 by LSN etc. [Temporary Solution]
 - > IPv6 deployment [True Solution]

Why doesn't the situation of only IPv6 internet come soon?

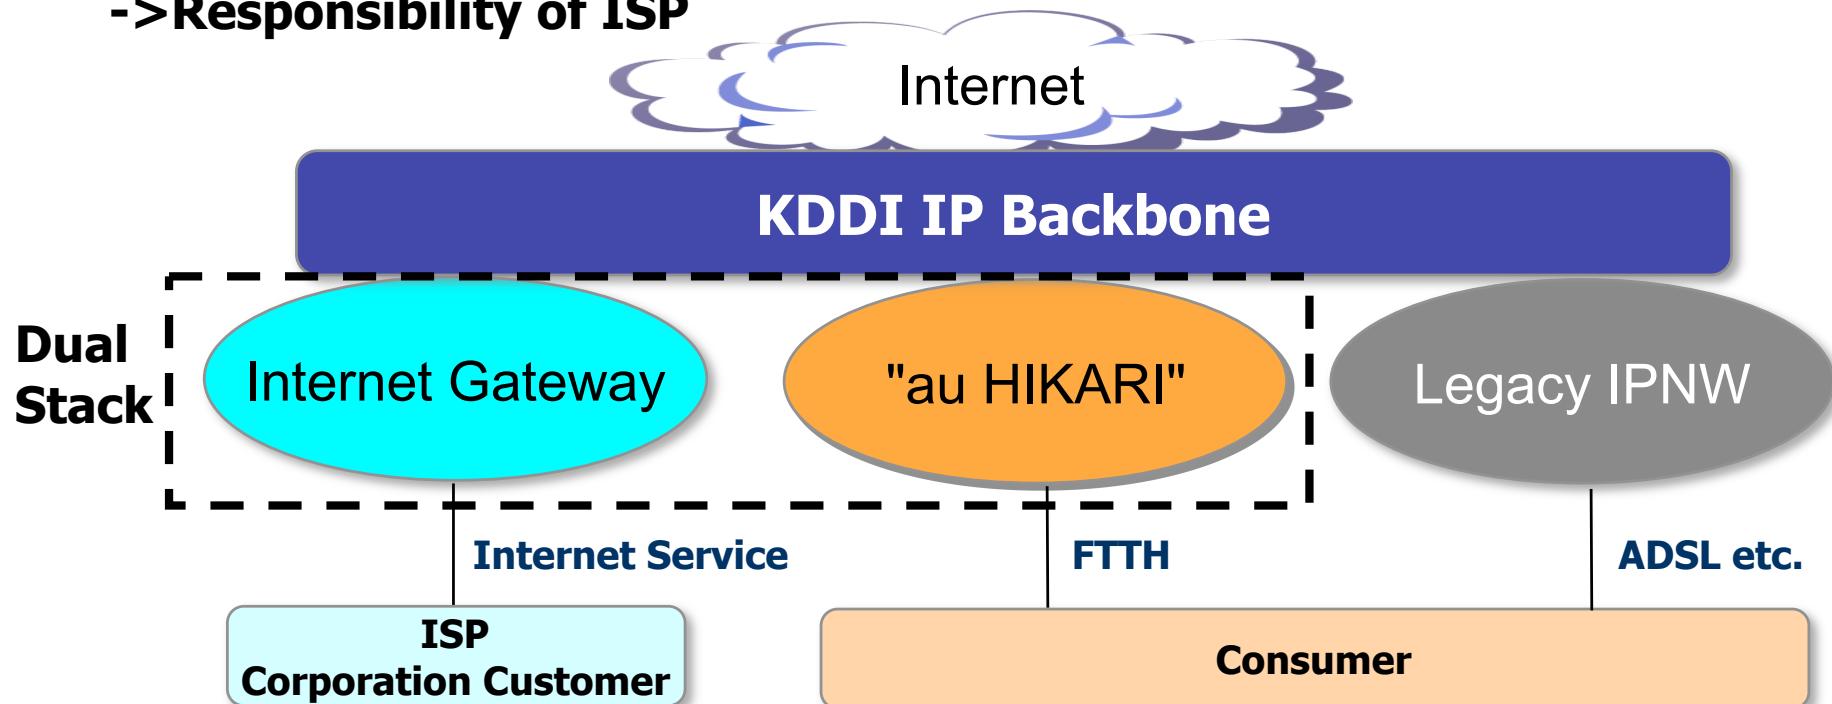

- (1) Cost of IPv6 deployment
- (2) IPv6 preparation of All ISP, contents providers and customers
- (3) No specific service of only IPv6 now

[Making decision of IPv6 deployment]

-> IPv6 is the true solution of IPv4 exhaustion and will continue to be used in the future.

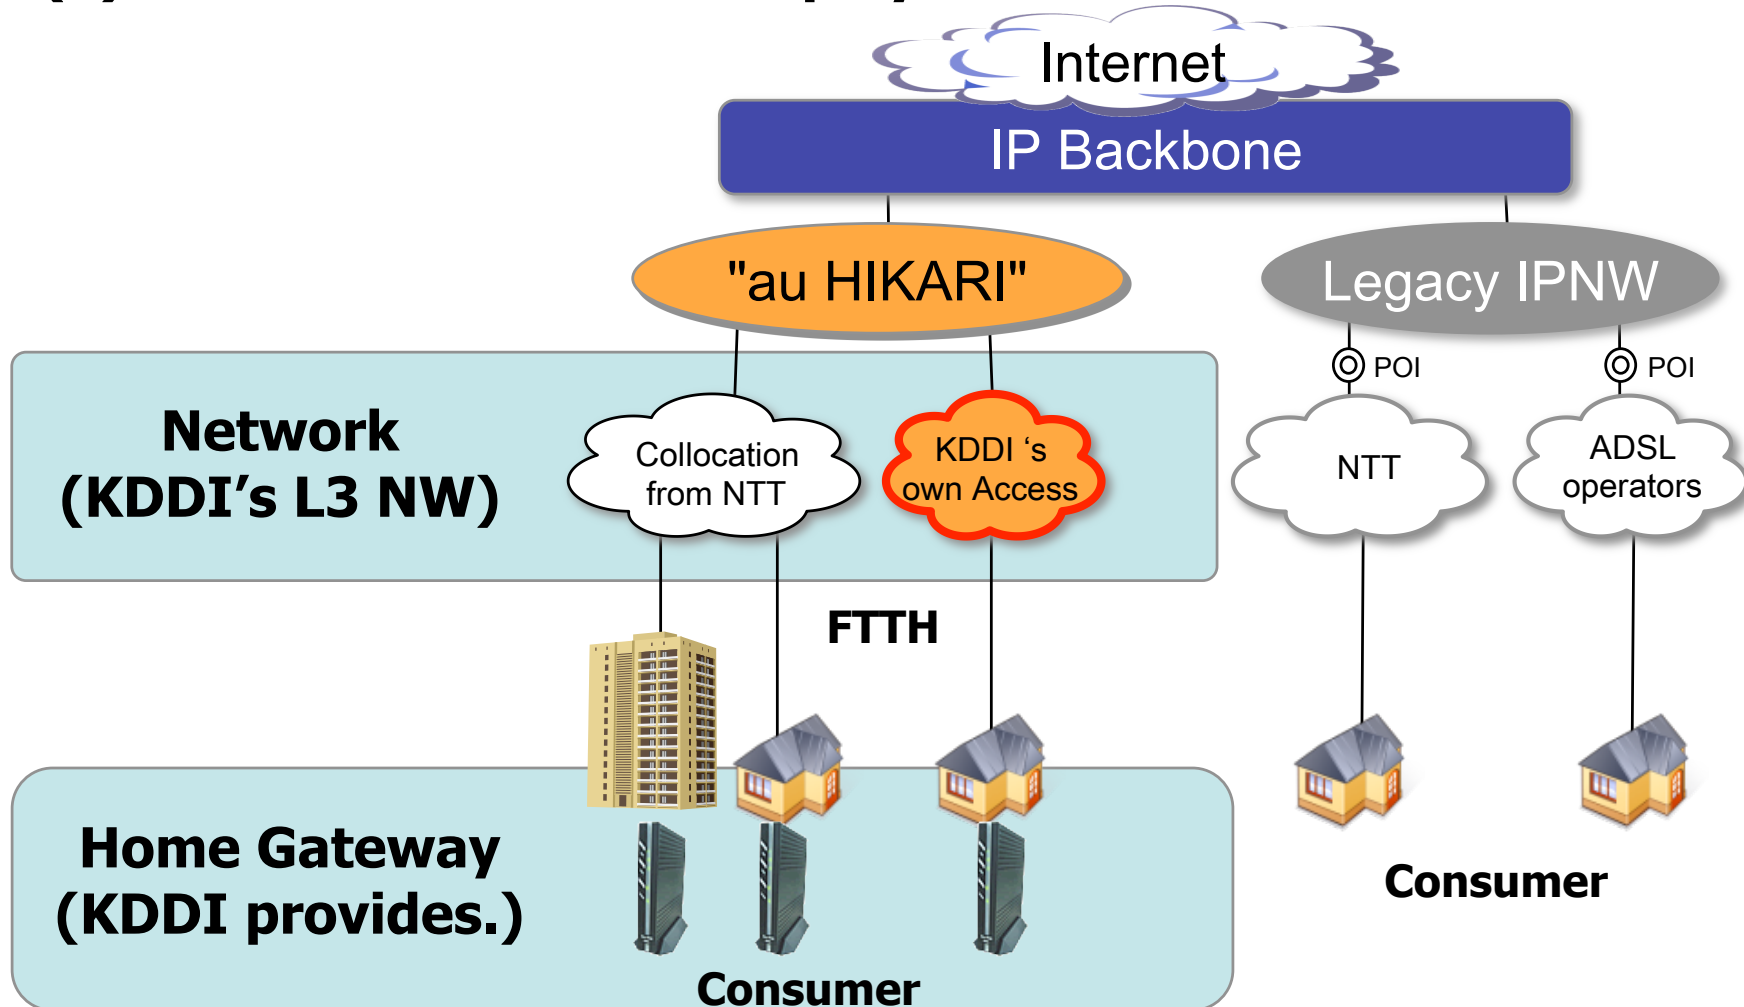

-> Responsibility of ISP

3. IPv6 deployment of "au HIKARI"(FTTH)

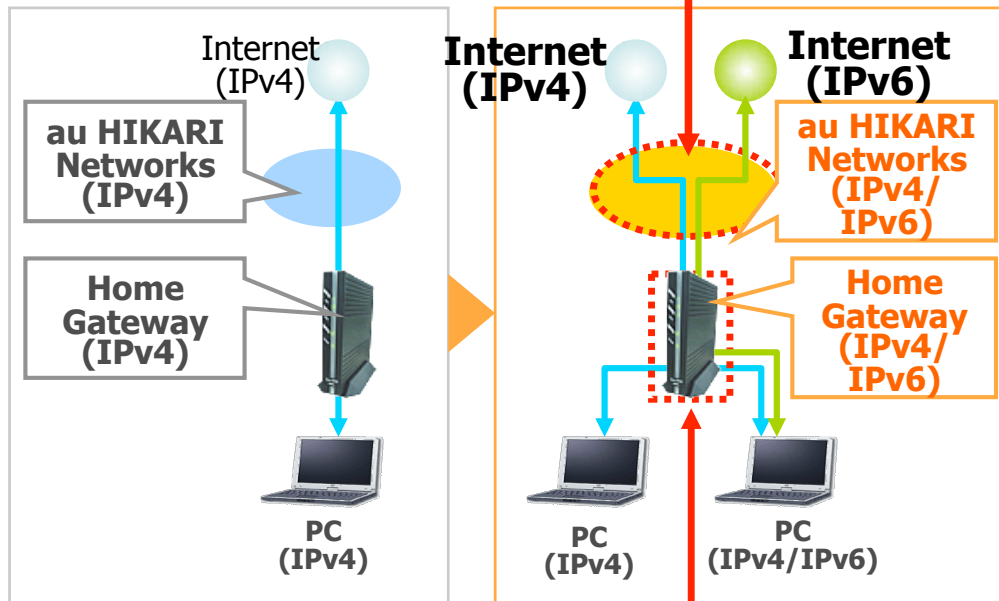

Key Issues of "au HIKARI" IPv6 deployment

- (1) Customers can get ready for IPv6 automatically.
- (2) Minimization of IPv6 deployment cost

Migration to IPv6

KDDI is making progress in implementing IPv6

IPv6 addresses get to be available just by carrying out the firmware upgrade of HGWs from the KDDI network operation center.

Customers automatically get ready for IPv6 without any action

No need to change parameters of HGW

No need to make an application for IPv6

An additional charge is unnecessary

Customers can use IPv6, if they have the IPv6 terminals.

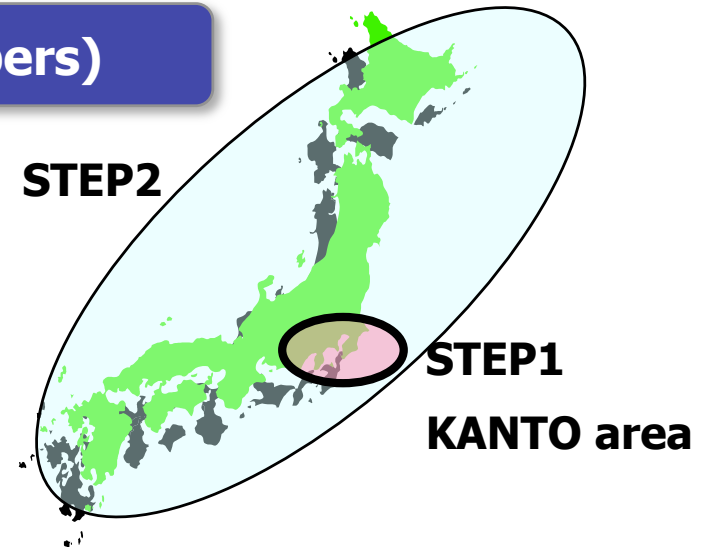

KDDI started the migration of "au HIKARI" in Apr., 2011

STEP1 KANTO area(620k subscribers)

2011						
Feb.	Mar.	Apr.	May	Jun.	Jul.	Aug.
Address Exhaustion of IANA		Address Exhaustion of APNIC and JPNIC		June 8 th ; World IPv6 Day		
Migration to dual stack NW of "au HIKARI" in KANTO area						

STEP2 except the KANTO area(876k subscribers)

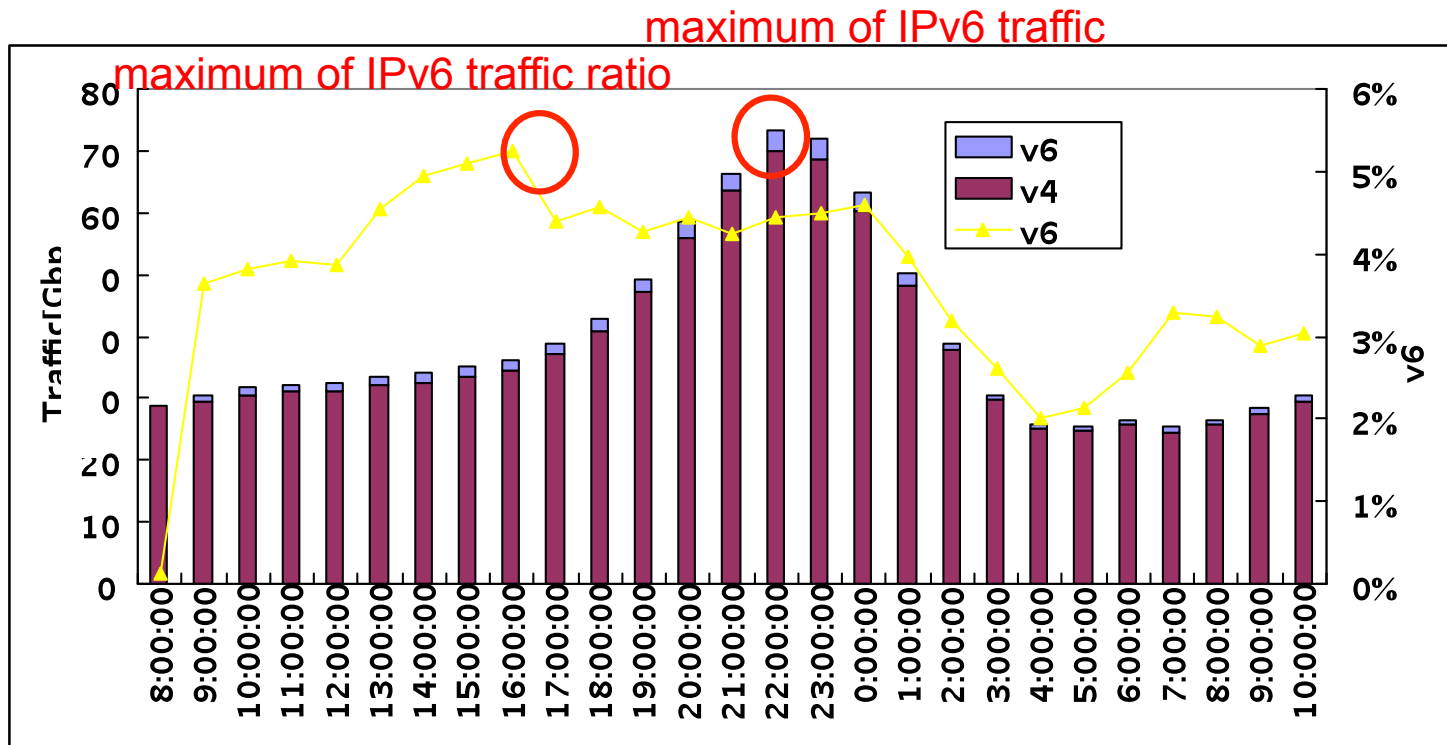

2012			
1Q	2Q	3Q	4Q
Migration to dual stack NW of "au HIKARI" in except the KANTO area			

4. World IPv6 day and next action

- **World IPv6 Day**
 - **Overview**
 - **This was an one day IPv6 experiment done world wide to find out the influence and impact.**
 - **Major giant CP,Google, Facebook and Yahoo also joined this project .**
 - **Day :**
 - **AM9:00 Jun-8 to AM8:59 Jun-9 in 2011 (JST)**
- **In fact,,,**
 - **Google's main services, Youtube, Gmail and Google documents were available by using IPv6**
 - **There was almost no report of fault.**
 - **World IPv6 day ended without confusion.**

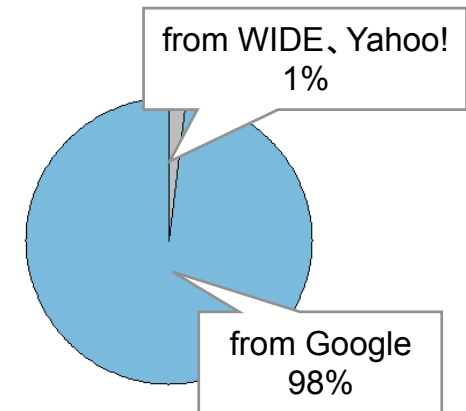

- An IPv6 traffic rate changes at 3-5%
(It was about 0.11% before World IPv6 Day)
- The maximum traffic is several Gbps (22:15).
- The most traffic came from Google to "au HIKARI"

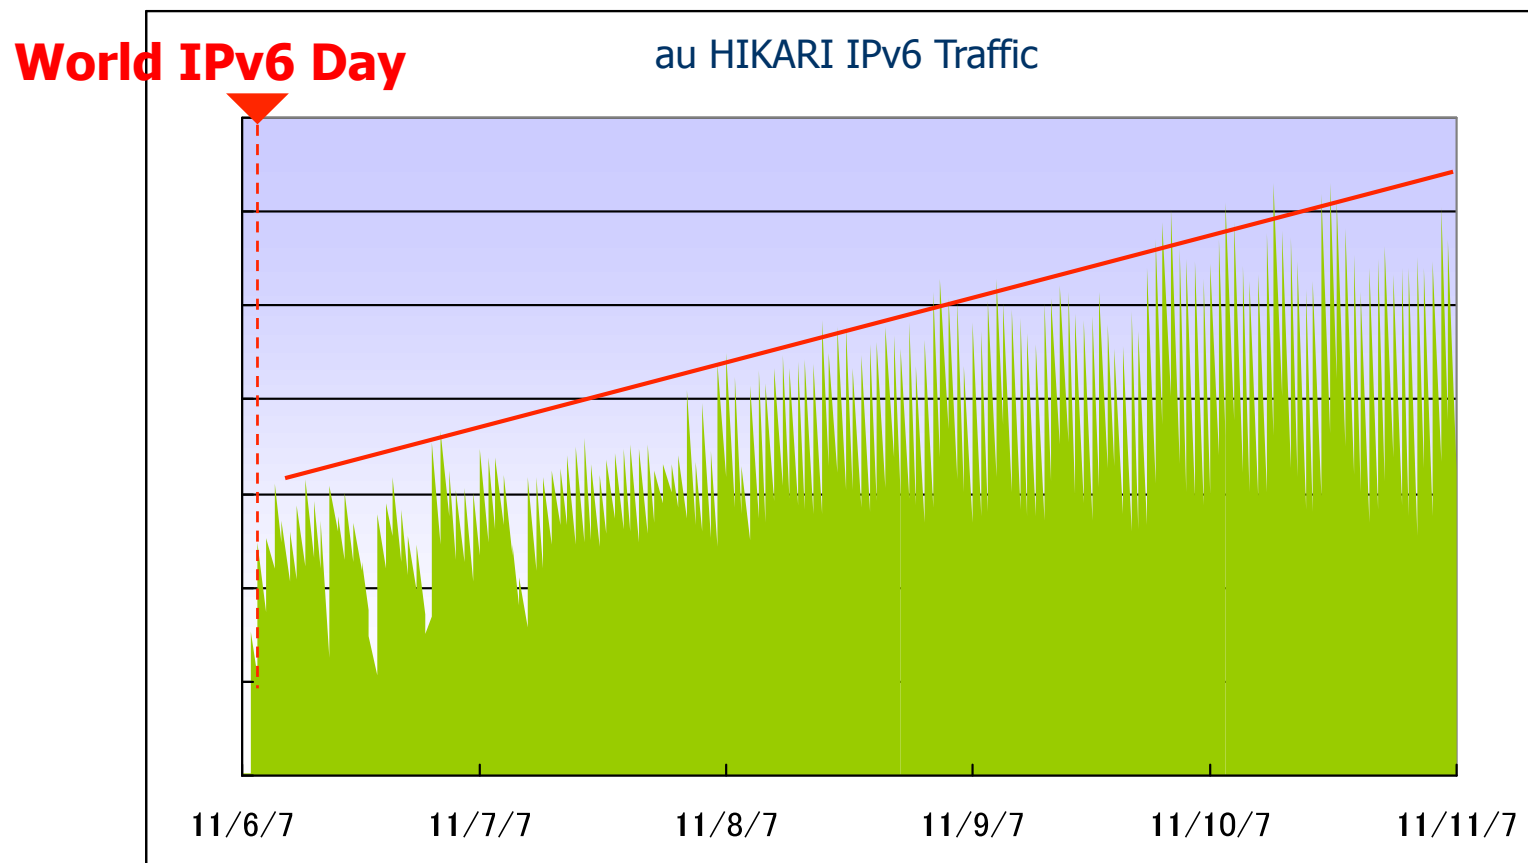

IPv4/IPv6 traffic (left axis)

a ratio of IPv4/IPv6 traffic(right axis)

Internet -> KDDI

- IPv6 traffic continues and increases after World IPv6 Day.
- The factor is increasing "au HIKARI" subscribers and subscribers who shift to Windows 7.

KDDI will participate in the World IPv6 Launch.

“World IPv6 Launch Solidifies Global Support for New Internet Protocol”

**Some ISPs committed that IPv6 will be automatically available.
At least 1% of their wireline residential subscribers will do so using IPv6
by 6 June 2012.**

Committed ISPs are:

AT&T

Comcast

Free Telecom

Internode

KDDI

Time Warner Cable

XS4ALL
